Wounds

Wounds managed by suturing, glue, stippling, or sterile strip

Water and dirt are enemies of wound, and should dried if become wet, or dress should be change.

Glue and sterile strip should not remove but will come out by itself

You should visit the nearest Health Care center in case of suturing to change dressing, every 2 days, and to remove sutures in the proper time

When you should see a doctor:

- **Increased pain or redness at wound area**
- **Discharge from wound or swelling**
- **fever related to wound**
