Swallowing Mechanism

Definition of Swallowing

The process of transferring food and liquid from the mouth and pharynx to the stomach, which requires the involvement and coordination of multiple nerves and muscles.

Stages of Swallowing

Oral preparatory phase: accepting the bolus into the oral cavity.

Oral phase: manipulation of bolus inside the oral cavity to create a cohesive bolus.

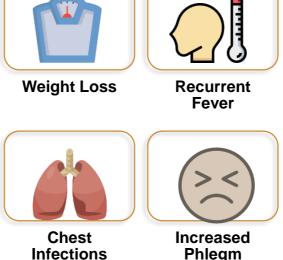

Pharyngeal phase: movement of the bolus from the oral cavity to the esophagus.

Esophageal phase: movement of the bolus from the esophagus to the stomach

What is Dysphagia?

Any problems with eating or drinking, that can include difficulties in controlling food/drinks in the mouth, difficulty chewing, and swallowing. It can be indicated by having frequent cough or throat clearing during or after meals, choking, or wet (gurgly) vocal quality after swallowing.

Signs of Aspiration

Causes of Dysphasia: Neurological Stroke Digestive Respiratory Cardiac

Swallowing therapist will assess dysphagia by:

- Checking the medical history and medical record.
- Oral motor evaluation to assess the movement, strength and coordination of oral musculature.
- Bedside swallowing evaluation.
- Diagnostic instrument evaluation i.e. Modified Barium Swallow Study (MBSS) and Fiberoptic Endoscopic Evaluation of Swallowing (FEES).

Therapy program can include:

- Changing liquid and food consistency and providing the patient with special mealtime equipment.
- Specific techniques or maneuvers during swallowing.
- Swallowing therapy exercises.
- Changing feeding methods.
