King Fahad Medical City (KFMC) has received the final accreditation of the Saudi Central Board for Accreditation of Healthcare Institutions (CBAHI) for the third time in a row, after achieving the highest degree among the other Saudi health institutions that are subject to the relevant standards tests.

Dr. Mahmoud Al-Yamany, CEO of KFMC, said that this recognition was the result of joint efforts and continuous support from all the leaders and staff of KFMC, and determination to commit to providing high-quality services and achieve excellence in patient safety. Dr. Al-Yamany added “There are more than 20 chapters identified by the CBAHI as a criterion for achieving this accreditation related to quality, leadership, medical records, human resources, medical services, nursing services, nutrition, pharmacy and infection control, as well as laboratories, environmental safety and safety of the facility; for this end we have been working in teams since we have obtained the previous accreditation 3 years ago to ensure the quality of services provided based on the preparations made by KFMC that helped us realize this achievement to a high degree, which, in turn, will help to improve the quality and patients’ safety to achieve our vision to be a benchmark in provision of specialized healthcare."

He added: "There has been continuous follow-up by the quality department to ensure that the policies are up to date and to guarantee adherence to the implementation of policies and standards and to issue periodic reports - In the past 6 months, intensive efforts have been made by about 7 teams working to implement these standards in different fields." It is worth mentioning that CBAHI aims to create environments that focus on improving the quality of healthcare, and devote its services to improving the quality, safety and effectiveness of healthcare services. In addition to applying high consolidated standards for patient care and safety by focusing on reaching the best patient care levels, assessing their cases and controlling infection.

The Center for Research, Education and Simulation Enhanced Training (CRESENT) at King Fahad Medical City (KFMC) has been accredited by the Society for Simulation in Healthcare (SSH) for the first time since its establishment in 2012 after fulfilling all the required conditions for obtaining accreditation.

Dr. Al Yamany, Chief Executive Officer of KFMC, said that obtaining such recognition underscores the quality of medical services provided at the KFMC and motivates looking forward to continuing the provision of the best level of health care in accordance with international standards. "Work in KFMC is proceeding according to a clear methodology aimed at upgrading the level of services to ensure patient safety and care at the highest standards." Dr. Al Yamany added.

On his part, Dr. Hani Lababidi, the Director of CRESENT at KFMC, said: "The Society was founded in 2004 and is internationally renowned and its goal is to organize simulation education to ensure patient safety. This is our main slogan. Therefore, all the controls related to this Society are related to the safety of patients. However, CRESENT in KFMC was providing these courses several years ago and constantly working to develop them. Therefore, we applied to the Society for accreditation at the beginning of this year, and one of their prerequisite conditions was to have a center for more than two years and continuously provide courses. Thank to Allah, we met this requirement and then we received an e-mail with the controls to be followed before the evaluation, including controls related to research and evaluation of each course provided by CRESENT, controls on the quality of courses it provides and whether or not they are related to the safety of patients, as well as controls related to the introduction of simulation in the medical aspects."
King Fahad Medical City (KFMC) has organized Nursing's Ninth Conference "a path to excellence" in the presence of a number of specialists in this field at KFMC's main auditorium.

The conference called for finding models that support nursing competencies in the Kingdom of Saudi Arabia, participation of local and international experts in dealing with nursing competencies in the Kingdom, considering the factors that hinder the development of nursing competencies, analyzing internal and external factors affecting the maintenance of nursing competencies in various health sectors, identifying the available current opportunities for the development of patient education and training programs, providing expert opinions on facing the challenges encountered by nursing education programs, evaluating and analyzing the various teaching methods used in nursing training programs and utilizing of scientific research for the development of nursing competencies.

The conference seeks to provide opportunities for the exchange of scientific cultures and practical practices that lead to qualitative and organized results to promote finding models that support nursing competencies in the Kingdom of Saudi Arabia, upgrading the level of nursing care and pursuing the roadmap to excellence.

Higher Management Meets KFMC Staff

Under the patronage of His Excellency the CEO, Dr. Mahmoud AlYamany, a general staff meeting was held on Sunday, October 22nd. Employees’ questions were answered and their concerns were addressed during the meeting. This came as a part of reinforcing communication between employees and the higher management as well as working on overcoming all obstacles and resolving difficulties that the employee may face aiming to achieve a exceptional working environment.

Nursing Considers Development of Practical Competencies

King Fahad Medical City (KFMC) has organized Nursing's Ninth Conference "a path to excellence" in the presence of a number of specialists in this field at KFMC's main auditorium.

The conference called for finding models that support nursing competencies in the Kingdom of Saudi Arabia, participation of local and international experts in dealing with nursing competencies in the Kingdom, considering the factors that hinder the development of nursing competencies, analyzing internal and external factors affecting the maintenance of nursing competencies in various health sectors, identifying the available current opportunities for the development of patient education and training programs, providing expert opinions on facing the challenges encountered by nursing education programs, evaluating and analyzing the various teaching methods used in nursing training programs and utilizing of scientific research for the development of nursing competencies.

The conference seeks to provide opportunities for the exchange of scientific cultures and practical practices that lead to qualitative and organized results to promote finding models that support nursing competencies in the Kingdom of Saudi Arabia, upgrading the level of nursing care and pursuing the roadmap to excellence.
Employee of the month

Vanessa Mae Tamayo: With a Smile, I Face Challenges!

"The Birth of an Adventurer"

Courage and confidence were among the most important features of Vanessa Mae Tamayo’s decision to leave her comfy home in Cotabato, Philippines, to work in Saudi Arabia and announce the start of nostalgia for the homeland. She did not find a more powerful weapon than smiling and spending free time communicating with her family to motivate her to work harder and stand up against difficulties and grief of her courageous experience.

"Achievements and Experience"

Vanessa obtained her Bachelor of Science in Nursing in 2007 from Notre Dame University, Cotabato, Philippines. She joined King Fahd Medical City as an emergency nurse in 2011 and after three years she was promoted. She was awarded the "Best Nurse" award in her department when she was in the clinical field, and was a member of the winning team in the Quality Day. Vanessa attributes her expertise to working alongside multidisciplinary teams and management support, which have been instrumental in building her confidence and developing her skills.

"A Whole New World"

When Vanessa first came to Saudi Arabia on 22nd September 2011, and despite the challenges of the foreign land and the new culture, she began to learn things one by one, day after day. Despite the difficulties of different cultures, she found a way to adapt. Her enthusiasm to be part of the family of KFMC emergency department helped her and her colleagues, who were all friendly with her, to overcome all the challenges and obstacles.

"Motives and Challenges"

Vanessa is proud to be in the emergency department - a fast-moving area, dealing with lives, stress and all kinds of emotions in order to provide care and save lives. Vanessa describes ER as a non-sleeping unit. Those who work there are the first line of defense, soldiers who fight in the field; they walk fast, eat in 15 minutes and spend 12 hours standing, walking, and running; they are able to relieve people’s pain and provide comfort for them. Although many of the days have not been very good for her, Vanessa always believes in the popular saying: “There is always a rainbow after the rain”. The rainbow for her is the smiles and nice words from the patients she takes care of. She does not see success as the total number of promotions or recommendations, but as the number of lives she helped to save or ease their pain – this type of success is not temporary... it is for the whole life!

"Conclusion"

Vanessa believes that learning and struggling is the best savings for anyone in order to realize their best achievements, no matter how many times they fail, struggle, shed tears, and wasted efforts. In King Fahd Medical City, Vanessa made a copy of herself that she could not imagine she will become one day. For this, she is really grateful. And looks forward to participating in the provision of healthcare at this great institution.

Prostate Cancer prevalence in men under 40 is rare, but increases after the age of 50.
50% of men above 60 suffer from prostate enlargement.
Congratulations to the all winners in Movember Competition!
