The role of health in the Hajj season

Medical institutions ensure rendering more services during Hajj as being the entities authorized to raise awareness and educate pilgrims through their hospitals and centers that contribute in providing healthcare and serving pilgrims. In addition, the medical institutions work to fully utilize its capacity through preventive programs.

Provision of medical cadre during Hajj is a part of a special working system and care different from the healthcare provided throughout the year; bearing in mind that caring for pilgrims requires highly competent and trained staff in all health areas.

Health services rendered during Hajj are represented in preventive programs, monitoring epidemiological situation, applying international health regulations and their requirements, which shall be maintained by pilgrims for their safety, early vaccination of domestic and foreign pilgrims and providing preventive treatment to them.

General Staff Meeting

The Chief Executive Officer of KFMC, Dr. Fahad Al-Ghaffal, held a meeting with all KFMC staff on Tuesday 23th of July 2019, during which they continued to respond to previous comments, Dr. Fahad Al-Ghaffal: We will not ignore any question or note and the answer will be public and presented the new administrative changes. Dr. Ibrahim Nasser Boushah was honored by King Fahad City's for the noble works. In addition, some of KFMC distinguished employees were honored, prior opening the floor to questions for all attendees.

9222" Dispatch Center in KFMC

King Fahad Medical City (KFMC) has launched "9222" Dispatch Center to manage and control emergency, safety, ambulance, and security cases, thus ensuring safe and prompt response which leads to risk reduction.

Dr. Fahed Al-Ghaffal, Chief Executive Officer of KFMC, emphasized that KFMC has played an important and effective role in the management of disasters and health crises by establishing this specialized center, as an immediate response to incidents and how to confront such incidents before, during or after occurrence, which, in turn, would achieve the desired objectives of controlling and eliminating these disasters.

Dr. Al Ghofaili explained that Dispatch Center works to respond to all emergency cases, as its role is to receive calls and coordinate between callers, security and safety personnel and paramedics to ensure access to the service provider within KFMC. The control room is equipped with a giant screen and interactive maps for all parts of KFMC, covering more than 1100 surveillance cameras, 3000 electronic gates and 4,000 fire detectors.

"The available technologies that are equipped with the highest technical specifications are used. For example, in cases of fire, Allah forbid, the fire is early detected then fire alarms go on while fire is being monitored onsite in a live broadcast on the CCTV system, in addition to controlling gates to send security teams to the site and be able to control any emergency case" He added.

In its course of management, the center will receive emergency calls with the team work, where the dispatcher can speak to emergency staff onsite, or to the caller to help him with the emergency situation, as the caller and dispatcher can have a live audio and video call using high technology until the emergency case is over. For quality assurance of health care, this process is automatically recorded for reference and to make sure that the appropriate procedures are followed.
KFMC Obtain the Fourth International Accreditation from CARF International

Employee of the Month

Dr. Enani: Scientific research is necessary to develop health care and develop techniques to help patients

Scientific research is a necessity, not a luxury. Developed countries have given great attention to scientific research because they recognized that the well-being of nations is credited with the scientific, intellectual and behavioral potential of their nationals. Scientific research plays a major role in strengthening the foundations of nations, achieving their development and maintaining their international standing.

Dr. Mushira Enani, a Gastroenterology and Infectious Disease Consultant and Assistant Professor at King Saud bin Abdulaziz University for Health Sciences, spoke about the importance of publishing scientific research in medical field, being one of the most prominent doctors in King Fahad Medical City (KFMC) to publish research. She also explained the obstacles and motivations faced by researchers in conducting their research.

How did you become among the top doctors who publish research?
I was one of the top ten doctors in H-index at KFMC. We were honored by H.E. CEO of KFMC at a staff meeting more than 6 months ago.

Tell us about H-Index
It is an index for describing the scientific output of a researcher and the extent of spread of his research. H-Index is named after the American physicist “Hirsch” of the University of San Diego, California, who developed it in 2005. It includes the number of papers published over the years, the number of citations per paper and the journals in which these papers were published.

What does medical research mean to you?
Scientific research is an organized investigation using scientific methods and approaches determinant of the scientific facts in order to check their validity and accordingly adjust or add to them, thus allowing researchers to raise the level of public knowledge. In the field of medicine, scientific research is a pressing necessity for development of health care services in general and for development of innovative and fast diagnostic techniques as well as for helping patients get the best medical care.

What is the desired benefit of medical research for patients and medical field?
Results of medical research may contribute to innovation or development of a specific medical technique that accelerates diagnosis and treatment of certain diseases, or to collection of evidence and proofs for discovery of medical information that contributes to finding strengths and weaknesses in health facilities, and thus finding the appropriate solutions to fill the gaps and raise the quality and efficiency, which in turn will benefit patients and raise the level of general knowledge in the medical field.

Tell us about the obstacles and difficulties you face in conducting medical research.
The biggest obstacle is that there is no time reserved for the most active researchers compared to their less active colleagues. There are policies developed, but to be activated is yet a major challenge. Other challenges are based on the difficulty of access to the information required for the research due to lack of an integrated electronic health system, which forces researchers into paper work that takes a lot of time and effort in addition to the lack of some important information recorded in patient files in case of retrospective investigation.

Describe the motivations you have in conducting medical research.
The main motivations are the passion for learning, development and urgency of finding medical solutions that contribute to improving the quality of health care. The active researcher would be thrilled that his research findings contribute to the service of society and would spread globally and share his findings at the international medical conferences, which would bring him respect in the medical community.
